# HOME MADE FARM RELIEF

This is a simple plan of direct and indirect farm relief which will:

- Reduce farm labor costs
- Improve soil fertility
- Prevent soil erosion
- Increase prices of farm products

No legislation is required and no great investment is involved. The plan simply stated is for farmers generally to:

**REPLACE AT LEAST 25% OF THE GRAIN AND COTTON ACREAGE WITH LEGUMES AND GRASSES.**

Every farmer, banker, land owner and seed dealer should practice and preach this simple plan which would reduce the cost of farming, preserve and improve soil fertility, prevent loss by erosion, and, by reducing production of the surplus farm products, would soon restore the cash crops to a profitable basis.

The importance and value of this plan is outlined in the following press dispatch quoting an eminent authority:

"Ralph F. Crim of the University of Minnesota, president of the International Crop Improvement Association of 15,000 dirt farmer members, tonight recommended improvement rather than abandonment of land to farm owners who find it necessary to restrict their acreage to domestic needs.

Speaking to representatives of the association from twenty-five states and Canada who opened their 14th annual meeting, Mr. Crim pointed out that the farmer who owns, operates and pays taxes on land will receive reluctantly a request to reduce his acreage.

But if he is shown how to readjust his acreage for a better economic return—if he is convinced it is sound farming to sow legumes and grasses on land which today only increases the surplus of wheat, corn and cotton, we will have invited the farmer's cooperation", he asserted.

"Well informed observers know that our pastures have received little or no attention. We have turned out on them early and have pastured late. As a result they have become depleted and are low in productive ability.

We could well afford to convert some of our acreage now growing cereal crops to pastures, for a few years at least, until consumption catches up with production. Our live-stock would benefit, the land would benefit and it would help with the erosion problem. We need more legumes. The acreage of alfalfa in many states and provinces could well be increased. Red clover, especially on the acid soils has been falling off. Sweet clover and soy beans have not been overworked.

Weeds have cost the farmer hundreds of thousands of dollars, he said in advocating quality production on acres planted to more suitable varieties, unmixed varieties, and varieties in demand at markets. The additional price for clean, pure grain, free of disease, damage and dockage, plus the lower cost of production, will make a material difference in the return to the producer," Mr. Crim asserted.

## SEEDING COSTS VERY LOW

Current prices are very low on such desirable legumes and pasture grasses as Alfalfa, Red Clover, Korean Lespedeza, Alsike Clover, Kentucky Blue Grass, Timothy and Red Top. This makes an added incentive to seed down a good acreage this spring.

**KEYSTONE PASTURE MIXTURES** are ready mixed for particular soil types, from the very best grade seeds, free from noxious weeds, from formulae recommended by Missouri Agricultural Experiment Station.

- No. 1 For productive, well drained, up-land or bottom soil.
- No. 2 For flat, level, poorly drained, probably acid soils.
- No. 3 For thin, worn, gravelly or stony soils.

**DEALER NOTICE:** Reprints of this page are available. Let us send you some to post in your office, in your local bank and other prominent places.
